PROFESSIONAL SUMMARY

Full Stack Software Engineer with 5+ years of experience designing, building, and maintaining scalable systems and product features across the full development lifecycle. Proficient in TypeScript, React.js, and JavaScript on the front end, with Python and FastAPI on the backend, and a strong command of PostgreSQL and SQL/NoSQL databases. Experienced with AWS, Docker, and GitLab CI/CD. Known for writing high-quality, testable, and maintainable code, identifying performance bottlenecks, and delivering independently with minimal oversight. Actively integrates AI development tools — including Claude Code and Cursor — into daily workflow to improve velocity and quality, and shares what works with the team. Strong communicator across both technical and non-technical stakeholders, with experience mentoring junior engineers through code review and pair programming.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, Python, FastAPI, React.js, Node.js, HTML5, CSS3, TailwindCSS, Shadcn, Bootstrap

Databases & Query: PostgreSQL, MongoDB, MySQL, SQL, NoSQL, Mongoose

Cloud & DevOps: AWS (S3, SES), Docker, GitLab CI/CD, Feature Flags, GitHub, Git, Bash

APIs & Integrations: REST, GraphQL, WebSockets, OAuth, SketchFab / 3D model APIs, Figma MCP, Mixpanel, Resend

AI Dev Tools: Claude Code, Cursor, GitHub Copilot

Practices: Agile/SCRUM, TDD, OOP, CQRS, DTO/DBO modeling, Accessibility (WCAG), Observability, Kanban, Jira

PROFESSIONAL EXPERIENCE

Enduvo | Tampa, FL (Remote)

Full Stack Software Engineer

Mar 2026 – June 2026

- Design, build, and maintain a full-stack TypeScript application featuring interactive 3D models that empower instructional professionals to deliver rich educational experiences.
- Engineered custom 3D tooling enabling creators to explode multi-mesh models and highlight specific features, translating complex business requirements into production-ready code.
- Implemented Figma MCP integration that reduced design-to-deployment cycle time by 50% in conjunction with Claude Code and Cursor.
- Architected and delivered a custom MCP server enabling secure, on-demand 3D asset downloads via pre-signed URLs, integrating directly into the team's AI-assisted development workflow to streamline asset pipeline operations.
- Refactored codebase to enforce consistent styling and code standards using Shadcn components with custom variants, maintaining backward compatibility while enabling future design evolution.
- Ensured all application surfaces—new and legacy—are fully accessible and mobile-responsive across diverse screen sizes, applying WCAG best practices throughout.
- Implemented GitLab Feature Flags and contributed to CI/CD pipeline improvements enabling safe continuous delivery, reducing rollback risk and improving deployment observability.
- Collaborated with cross-functional partners across sprint planning and design reviews to clarify requirements, balance tradeoffs, and deliver technical solutions aligned with business priorities.

Enduvo | Tampa, FL (Remote)

Junior Full Stack Software Engineer

Aug 2025 – Mar 2026

- Built TypeScript front-end and contributed to Python back-end for a multi-million-dollar defense contract application on accelerated delivery timelines.
- Reduced UI deliverable timelines by 50% leveraging Figma MCP, Claude Code, and Cursor while actively managing and reducing AI-introduced technical debt.
- Implemented CQRS pattern to independently scale read and write workloads, balancing tradeoffs between scalability and maintainability; built DTO and DBO models to enforce typed, restricted data contracts across the stack.
- Identified error handling as a systemic bottleneck across CQRS layers and centralized it, standardizing API response contracts to accelerate debugging and improve system observability.

- Engineered a microservice-based façade for external 3D model providers (e.g., SketchFab), delivering a scalable interface for searching, previewing, and importing assets.
- Integrated Mixpanel analytics to track user engagement and feature adoption, providing internal teams with actionable usage insights to inform prioritization; implemented scheduled cron jobs with Resend to automate user notification workflows and reduce manual operational overhead.

Waveform Entertainment | Seattle, WA (Remote)

Front End Developer

Feb 2022 – Sep 2023

- Served as core developer on Icarus, a next-generation remote collaborative broadcast platform, owning feature development from design through production deployment.
- Developed Twitch OAuth user management features and integrated RESTful and GraphQL APIs, enhancing administrative control over broadcast operations.
- Collaborated with 10+ designers and engineers to deliver interactive web experiences using React, MongoDB, Mongoose, Express, Node.js, WebSockets, and Docker.
- Led sustenance efforts on legacy system components, performing root-cause investigation, evaluating remediation options, and shipping targeted enhancements including a custom hotkey system and reusable Node packages that improved platform reliability.
- Championed TDD and thorough test coverage across the team, driving a 20% reduction in production-branch defects and establishing a standard for writing high-quality, testable, and maintainable code.
- Maintained clean, readable code across the MERN stack adhering to ESLint/Prettier standards; documented architecture using Markdown for cross-team accessibility.

Trilogy Education | Seattle, WA (Remote)

Teaching Assistant

Aug 2020 – Feb 2022

- Mentored 20+ engineers through full-stack fundamentals via collaboration, pair programming, and structured code review — fostering a learning culture and raising the bar on code quality and best practices.
- Conducted detailed code reviews emphasizing best practices, file organization, and criteria adherence, bridging technical instruction with clear communication for diverse learners.
- Supported live instruction via Slack and Zoom, facilitating guided lessons and reinforcing concepts in an agile, remote-first environment.

EDUCATION

University of Washington – Continuing Education

Seattle, WA

Full Stack Web Development Bootcamp | Completed May 2020
